The quality of time

Wave astrology combines scientific research with the experiential knowledge of astrology

Harmony and disharmony
in November 2022

Biographical rhythms
from birth to 12 years

Are there times when the
probability of having a smart
child is higher?

Historical events
The Berlin Wall

Editorial

The statement "Everything is vibration" is said to go back to the mysterious Hermes Trismegistos and is well known to every astrologer.

Scientific researches on the structure formation in complex systems of evolution interpret the world as a gigantic oscillating system, which consists of many likewise oscillating subsystems.

oscillating subsystems. This includes the planetary system as a vibrating complex of celestial bodies, which are more or less strongly coupled by gravitation.

Research in wave astrology confirms the importance of planetary harmonics to human life and will be discussed in more detail in future issues.

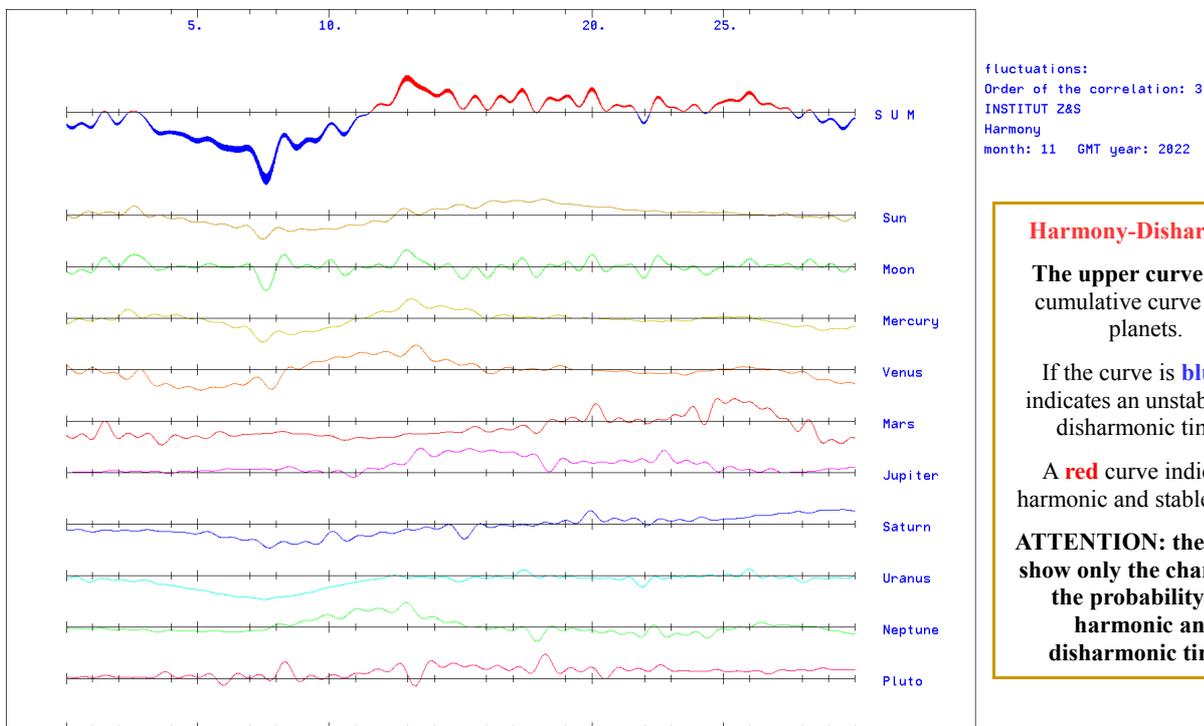

This coupling generates vibrations like the sides of a musical instrument. And as with a violin, it is not only the fundamental vibration but only the harmonics that produce the complex structure that we call sound.

In this issue, in addition to the current **quality of time in November 2022**, (here we look specifically at the extraordinary time of the full moon), the focus is on the **birth of man**. We begin with the influence of the major planets in the period of a child's birth, and first explore the question: is there a frequency pattern for the expression of a lower value for a child's intelligence? In the article on **Biographical Rhythms** we look at the 1st cycle from birth to 12 years of age. Here the influence of the time quality is still visible in the physical development.

The Berlin Wall, the decision to build it, is examined in another article. The results make it clear that decisions in a disharmonious quality of time can cause problems later on.

Your Team Wave Astrology

Harmony and disharmony in November 2022

Harmony-Disharmony

The upper curve is the cumulative curve of all planets.

If the curve is **blue**, it indicates an unstable and disharmonic time.

A **red** curve indicates harmonic and stable times.

ATTENTION: the curves show only the changes in the probability for harmonic and disharmonic times.

The entire evolution, of the earth, of the animal and plant world and also of humans is exposed to a constant change between stable and unstable states. If this were not the case, there would be no development.

Of course, many people would like to live in harmony and stable states, and it is also reasonable to always strive for such, but they cannot be permanent. Unstable states follow, the overcoming of which may enable a new harmony on a more complex, higher level.

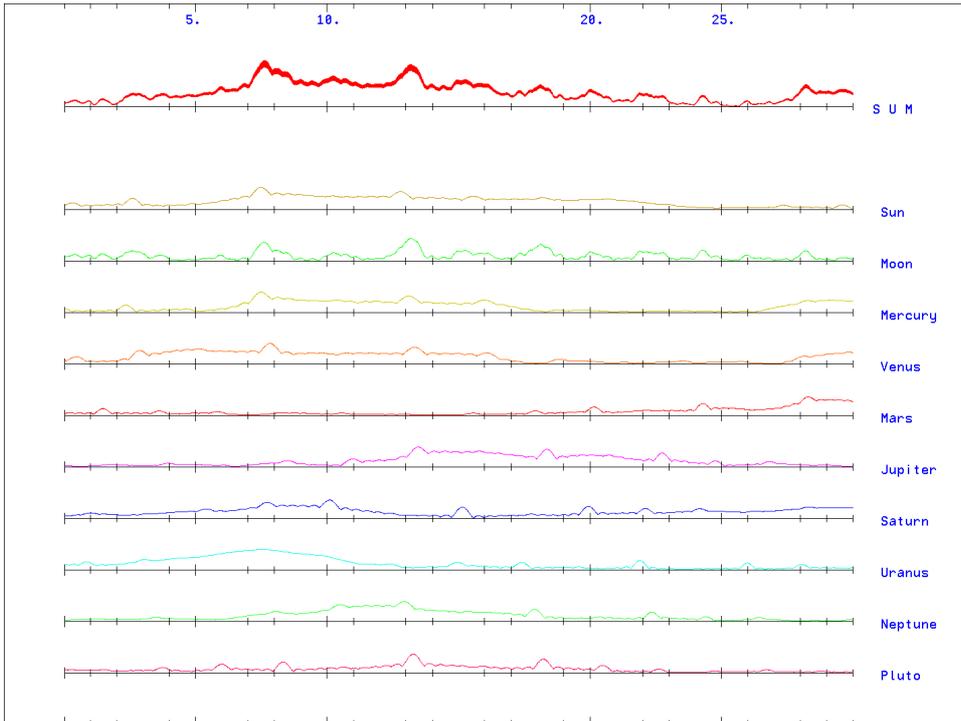

Full moon is on November 8. Full moon time is certainly a romantic time, but not in the quality of time. It is usually an unfavorable time to start an undertaking.

But this full moon is no ordinary full moon! Beside sun and moon also the planets Mercury, Venus, Mars, Saturn and Uranus are disharmonious. The sum of these disharmonies also results in a relatively high energy (*following picture for the energy*). Try to postpone the start of an undertaking, the "birth" of something, possibly even a necessary operation. Try not to give any reason for an argument. Try to avoid aggressive situations and if it is not possible, calm them down. As you can see from the graph, the time from November 12 is more favorable. On November 14, there is also a high energy for undertakings that start harmoniously.

Always keep in mind that the quality of time affects all the people around you, regardless of which resonance (transit) you personally are in.

The time quality prevailing around November 8 is quite suitable to trigger larger earthquakes.

Condition for it is however that sufficiently high tensions have built up in the earth's crust [1].

Energy

The upper curve is the cumulative curve of all planets.

The distance of the curve from the black line indicates the strength of the energy.

It is a measure of the energy of harmonic and disharmonic states.

ATTENTION: the curves show only the changes in the probability for the energy.

For this purpose, the interactions of all planets, including the sun and the moon, are considered among each other. From the first matrix you can already see that many elements have a negative sign, indicating increased disharmony or instability.

The following expression is from the research program. It contains two matrices, each consisting of 10 rows and 10 columns.

```
Statistics 4: Probability of events: correlation matrix H

Structure of the matrices for harmony (H):

1st matrix indicates the change of harmony or disharmony (negative sign -).

The highlighted number **|-9.82|** indicates the disharmony of Sun (1st row, 2nd column) and Moon (1st row, 2nd column). It is the opposition of sun and moon to the full moon. (the exact opposition has the value -10 but a time rounded to the hour was entered for the calculation).

The numbers below the diagonal are only the mirrored upper numbers.

The following matrix shows the probabilities for the interactions from the matrix above. Compared here are 10000 randomly chosen events in the time period given in the footnote of the matrix.

Matrix H of the probability of error

 10=PLUTO; 11=IC;
 BEGIN: year: 2022 month: 1 day: 1 hour: 0 END: year: 2023 month: 1 day: 1 hour: 0

Structure of matrices for probability of harmony (H):

2nd matrix shows the probability for this correlation in the examined period. Values greater than **99.00** represent a highly significant rare event with respect to the correlation.

The highlighted number **| 99.80 |** ($I=Sun/2=Moon$) indicates that 99.80 % of the examined 10000 constellations are more harmonic. This correlation between sun and moon is very disharmonious.

A number smaller than **1.00** indicates that less than 1% of the 10000 constellations have a higher harmony or stability.

The numbers below the diagonal are only the mirrored upper numbers.

Highly significant instabilities or disharmonies show Sun (99.99), Moon (99.69), Mercury (99.99), Saturn (99.41) and Uranus (99.97). The last column represents the row sum for the corresponding celestial body.

Note what areas these instabilities might affect:

Primal principles (oscillators) and the disharmonic effect of their generated harmonics on the following exemplary areas (empirical values):

1st Sun: Disturbed or exaggerated self-esteem, problems in group and team cohesion.

2nd Moon: Careless expressions of emotion, disharmonies in groups.

3. mercury: disturbed communication, careless remarks

7th Saturn: Disturbed order, tendency to superficiality, inattention and unstructuredness.

8th Uranus: Imprudent spontaneity, rash actions, excessive risk-taking.

List of highly significant **discordant** correlations:

Sun - Moon (99.80) Emotion and self-esteem are not in harmony

Sun - Mercury (99.57) reinforces egocentric thinking

Sun - Uranus (99.43) Tendency to manic - depressive mood (connected with dangerous spontaneity)

Moon - Mercury (99.82) rash and disturbing emotional expressions

Mercury - Uranus (99.65) hurtful, spontaneous expressions of opinion

Mars - Jupiter (95.51 - significant) unfounded claim to power and superiority, exaggerated reactions

If you find yourself in such a "disharmonious time", it can be advantageous to pay attention to it and not give the wheel out of your hand. Such rough times pass and afterwards the sun laughs again. If the time becomes more harmonious again and also has a lot of energy, undertakings succeed more easily, especially if you know this quality of time.

A metaphor for this is a sailboat that you steer while keeping an eye on all dangers. In this way, you come through the rough seas strengthened and unscathed and do not suffer shipwreck.

Note: if you need a time quality analysis for an appointment, please contact the email address at the end.

The following matrix has the same structure as the matrix above. Please look at the explanations of the above matrix.

Structure of the matrices for energy (I):

1. matrix shows the change of energy.

The highlighted number 9.10 indicates the energy of 3=Mercury (3rd row, 8th column) and 8=Uranus (3rd row, 8th column). The numbers below the diagonal are only the mirrored upper numbers.

2nd matrix shows the probability for this correlation in the examined period. Values greater than 99.00 represent a highly significant rare event with respect to the correlation.

The highlighted number |99.37| (2=Moon/5=Mars) indicates that 99.37 % of the examined 10000 constellations have a higher energy. This constellation (2=Moon/5=Mars) has very little energy.

A number smaller than 1.00 indicates that less than 1% of the 10000 constellations have a higher harmony or stability.

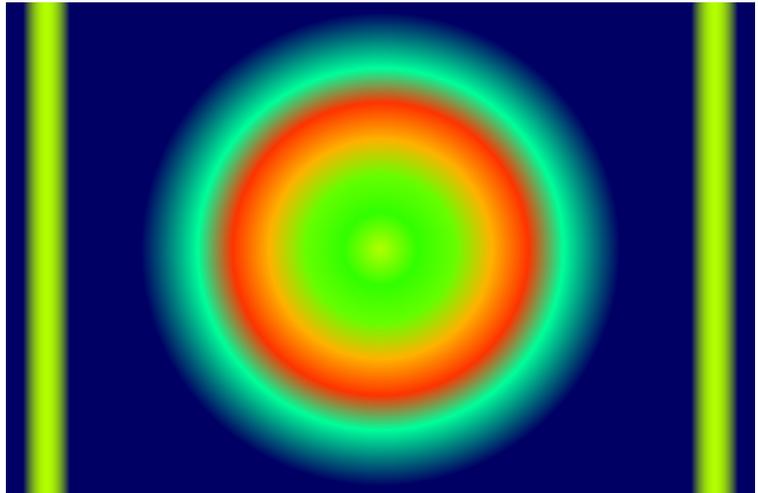

The highlighted number 0.35 (3=Mercury/8=Uranus) indicates that only 0.35% of the examined 10000 constellations have a higher energy. This constellation between Mercury and Uranus has a high energy.

The numbers below the diagonal are only the mirrored upper numbers.

The matrix for the energy shows which celestial bodies and which correlations have a particularly high energy.

For this example, the time of the full moon, the energy for instabilities and disharmonies is also very high. In the studied period of the whole year 2022, this full moon is a very, if not the most unstable time.

Look at the mandala, it contains all the colors that contribute to their personal harmonization in the disharmonious full moon time via color psychology.

Historical events

The Berlin Wall

Wikipedia:

"The decision to close the sector border was made at a meeting between Khrushchev and Ulbricht in Moscow on August 3, 1961, after the Soviet leadership had long opposed such a project since the mid-1950s. The plan to build the Wall, or literally to "secure the western border," was then decided at the meeting of the political leaders of the Warsaw Treaty states from August 3 to 5, 1961. The wall was to serve the rulers of the Eastern Bloc to finally stop the colloquially called "vote with the feet", away from the "socialist workers' and peasants' state", by sealing off the borders.

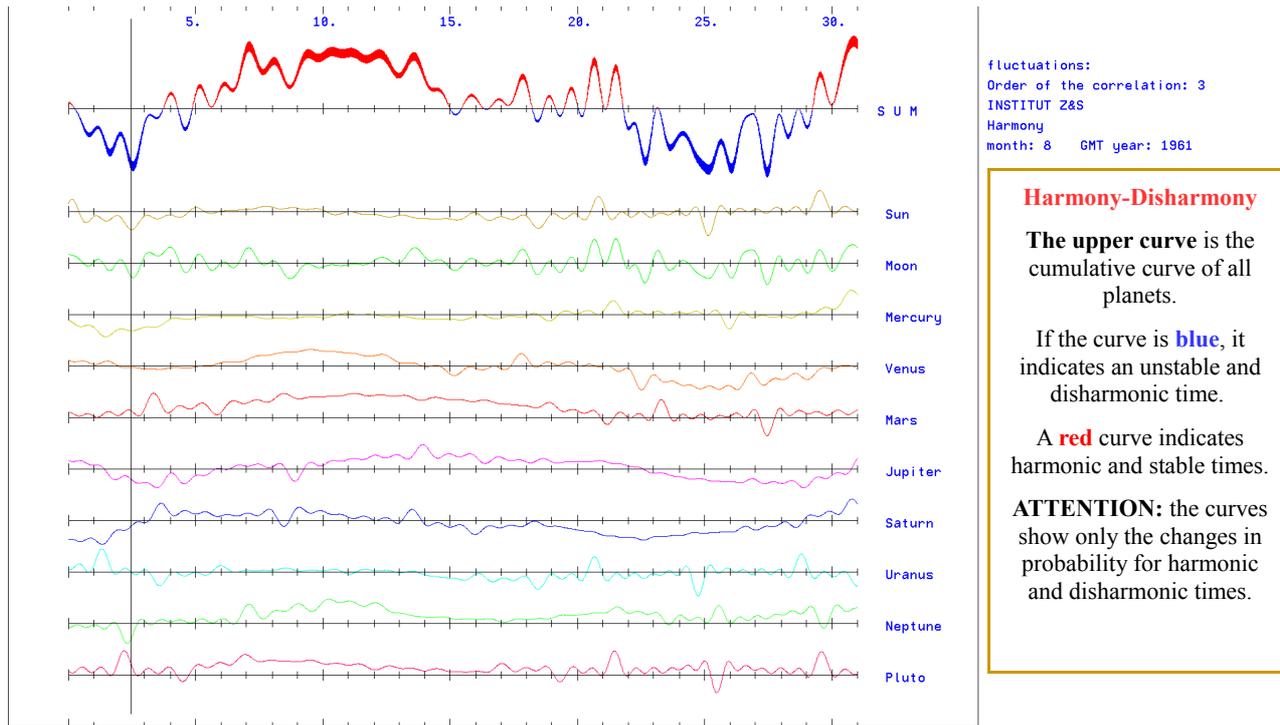

The plan to build the Wall was a state secret of the GDR government. It was not until August 10, 1961, three days before the Wall was built, that the Federal Intelligence Service received the first indications that the Wall was to be built. The Wall was built at the behest of the SED leadership under the protection and surveillance of People's Police officers, soldiers of the National People's Army and, in part, members of the construction workers' combat groups".

What was the quality of time in Moscow on August 3, 1961?

For historical events, the lower orders of the correlation function are used. Also, for historical trends of greater magnitude, the major planets are preferred.

In this particular case, the decision was between two people, so the planets closer to the sun are also considered here.

Let us first look at the time quality of August of 1961.

The time for this decision is very disharmonious (black, vertically continuous line) and extremely unfavorably chosen for such far-reaching consequences. The following quality of time around August 13, the beginning of the building of the wall, is harmonious and stable. The erection of the wall itself was not chaotic and proceeded without major disturbances.

Was the decision to build the Berlin Wall a particularly disharmonious event in this century? The matrix shows a significant disharmony for this point in time.

For the explanation of the following matrix, please look at the previous explanations of the matrices.

Structure of the matrices of probability for harmony (H):

2nd matrix shows the probability for this correlation in the examined period. Values greater than **99.00** represent a highly significant rare event with respect to the correlation.

The highlighted number of the correlation between Moon (2) and Neptune (9) | **99.13** | indicates that 99.13% of the studied 10000 constellations are more harmonious. This constellation (Moon/Neptune) has a very low harmonic and indicates instability.

A number smaller than **1.00** indicates that less than 1% of the 10000 constellations have a higher harmony or stability. Such a constellation has a harmony and stability.

The numbers below the diagonal are only the mirrored upper numbers.

Significantly discordant are:

Sun - Moon

This decision to build the wall seems to have been made out of a sense of hubris.

Sun - Pluto

There was no assessment of the destructive consequences this decision could cause.

Moon - Pluto (*highly significant*)

The feeling about the emerging consequences of the construction of the Wall was not clear.

Mercury - Jupiter

The communication of this decision was characterized by a constructed claim to power.

Mercury - Saturn

A new order was proclaimed to protect the GDR ("anti-fascist protective wall"), but in reality it was a "prison wall" for the citizens, a revaluation and concealment of a concept of order (separation wall).

This topic will be continued in the next issue.

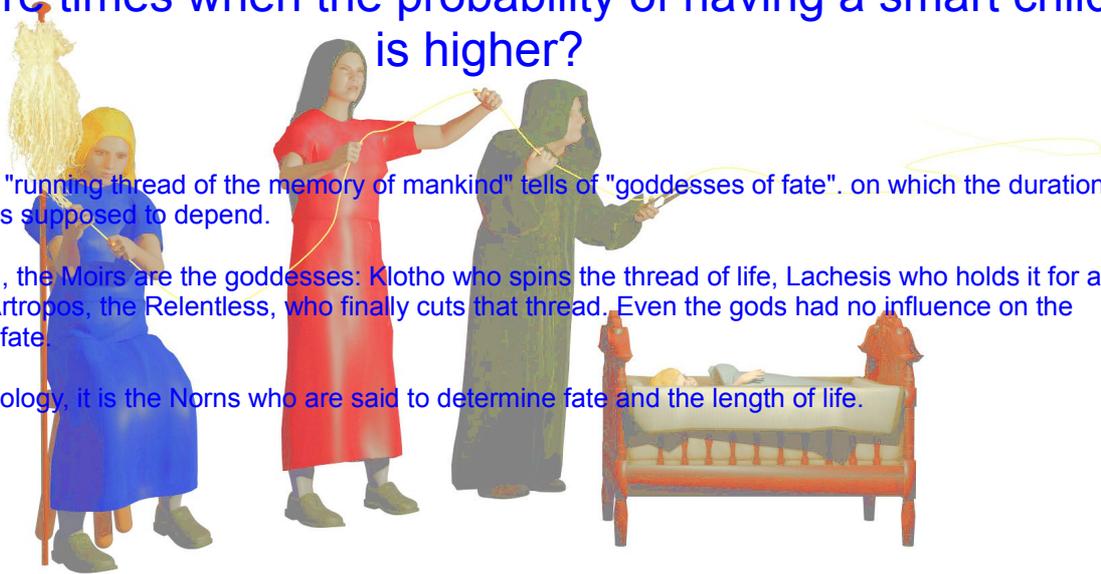

The quality of time at birth

Are there times when the probability of having a smart child is higher?

The myth, the "running thread of the memory of mankind" tells of "goddesses of fate". on which the duration of human life is supposed to depend.

In Greek myth, the Moirs are the goddesses: Klotho who spins the thread of life, Lachesis who holds it for a lifetime, and Artropos, the Relentless, who finally cuts that thread. Even the gods had no influence on the goddesses of fate.

In Norse mythology, it is the Norns who are said to determine fate and the length of life.

There is an extensive study on this topic [2], citation:

"The human brain is a highly complex system of nerve cells whose organization and interconnection via synapses is neither genetically nor otherwise completely determined. Thoughts, feelings and strategies of the human intellect are not predetermined in all details. In the course of the evolution of the human brain, the ability to learn has emerged as an important element of human development. Learning due to synaptic plasticity is a lifelong process.

To what extent planetary fluctuations could possibly gain influence on the structural formation of the brain during evolution will be investigated in the following calculations. Here, the intelligence of the brain is assumed to be a complex system performance for survival strategy characterized by stability and instability of the neuronal structures. A generally accepted definition of intelligence does not exist today.

The development of intelligence of a human individual depends on many influencing factors. Very important is the genetic constellation, which is given by the parents. In addition, many factors of the environment have an effect on this development. Last but not least, the psychological personality concept is also significantly involved in the further development of intelligence. The observation of children whose intelligence quotient was measured at about 10 years of age and whose further school career was followed clearly indicate the great influence of such personality factors as ambition, diligence, motivation, etc., on the formation of intelligence.... "

The explanation of this matrix can be found at the first matrices of this issue (from page 3).

Structure of matrices for probability of harmony (H):

2nd matrix shows the probability for this correlation in the examined period. Values greater than **99.00** represent a highly significant rare event with respect to the correlation. The constellation is very strongly disharmonic.

The highlighted number **| 99.08 |** is the row sum for the planet Jupiter, it indicates that 99.08 % of the examined 10000 constellations are more harmonic.

A number smaller than **1.00** indicates that less than 1% of the 10000 constellations have a higher harmony or stability. These constellations are very harmonious.

The numbers below the diagonal are only the mirrored upper numbers.

Statistics 4: Probability of events: energy I
 Order of the correlation: 3 ; GROUP-MEMBERS: 14 ; NUMBER OF THE GROUPS: 10000
 Accidental selection; TEST: Number of accidental selection >= correlation

Matrix I of the probability of error:

Structure of the matrices of probability for energy (I):

2nd matrix shows the probability for this correlation in the examined period. Values greater than **99.00** represent a highly significant rare event with respect to the correlation. These constellations have a very low energy.

The highlighted number **| 0.42 |** (7=Saturn/9=Neptune) indicates that only 0.42 % of the examined 10000 constellations have a higher energy. This constellation itself has very little energy.

A number smaller than **1.00** indicates that less than 1% of the 10000 constellations have a higher energy. These constellations have a very high energy.

The numbers below the diagonal are only the mirrored upper numbers.

This group is made up of people whose intelligence was not suitable for a normal school. They all attended a special school.

The matrices are suitable as filters to filter out similar constellations from time. It must be assumed that these constellations cause that the IQ to be expected from the genes of the parents cannot be achieved for the child.

The constellation is significantly disharmonious overall at **98.88** with a significantly high energy **1.42** (only 1.42% of the control group has a higher energy) for this disharmony.

As an example, 3 constellations are considered here:

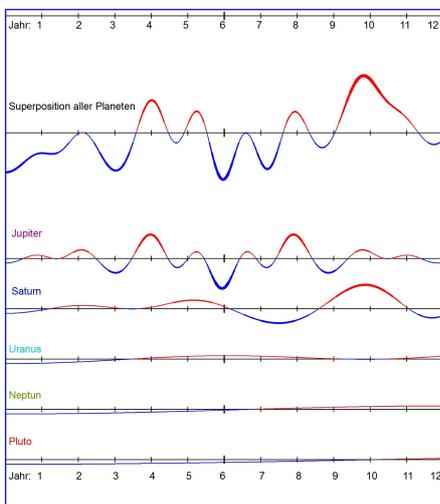

Moon - Mercury (highly significant disharmonious with **99.47** (99.47% of control groups have higher harmony) with a significantly high energy **3.42** (only 3.42% of control groups have higher energy)) This constellation brings a strong disturbance in communication. The ability of expression will suffer, there will be speech and writing problems.

Venus - Jupiter (significantly disharmonic **96.46** with a relatively still high energy **10.63**) This constellation, if no other factors are at work, favors an unsympathetic appearance. These people will not be very popular.

5 planets, Sun 95.43, Moon 98.34, Mercury 96.42, Jupiter **99.08** and Pluto 97.48 are significantly and highly significant disharmonious. The energy for this disharmony is high, even significantly high in some cases. Life with these natal constellations will certainly not be very easy and simple.

Important note: These constellations do not necessarily lead to a lower IQ, but they can, if the genetically expected IQ is 120, mean an IQ of perhaps 110 for the child.

Topic to be continued in the next issue.

Harmony-Disharmony

The upper curve is the cumulative curve of all planets.

If the curve is **blue**, it indicates an unstable and disharmonic time.

A **red** curve indicates harmonic and stable times.

ATTENTION: the curves show only the changes in the probability for harmonic and disharmonic times.

Die Wellenastrologie beruht auf den Schwingungen der Planeten, die alle miteinander in einer Wechselbeziehung sind. In der Wellenastrologie wird jeder Planet mit jedem in eine Beziehung gesetzt. Damit ergeben sich völlig neue astrologische Analysemethoden und neue grafische Darstellungsmöglichkeiten.

Rhythms are a basic phenomenon of life, they permeate day and year and the entire course of human life. With our first breath we humans dive into the stream of time, into the rhythms of life, with the last breath we leave these rhythms again. The planets continue to move in their orbits. For the unfolding of human biography, the planets that move their orbit beyond Mars (*Jupiter, Saturn, Uranus, Pluto*) have an essential importance.

The methods of wave astrology make it possible to represent the planetary correlations in curves, including a superposition curve (superior curve).

The chart shows that the curves of Jupiter, Saturn, Uranus, Neptune and Pluto are disharmonious at birth. Birth is usually not a harmonious time for the baby. Uranus, Neptune and Pluto remain largely unchanged in the disharmonious area for a long time after birth. For the first 12 years of life, the rhythms of Jupiter and Saturn are essential.

The rhythms of Jupiter indicate development, the rhythms of Saturn point to stagnation and thus to possibilities of maturity.

When interpreting the graph, it should be noted that there may be slight individual shifts in the generations. (*These are caused by the elliptical orbits of the planets and the associated temporal change of the orbital velocity*).

The curves show that children often experience a particularly harmonious period at the age of about 4 to 5 years and from 9 to 11 years. During the harmonious periods, there are particularly favorable developmental opportunities. This also applies to later ages.

The rising curve of Jupiter up to the 2nd year of life (Jupiter is in sextile (60° angle) to itself) and the harmonic superior curve around the 4th year of life (Jupiter in trine (120° angle), Saturn in sextile to itself) indicate times when the child very much needs security and nest warmth in order to be able to build up a basic trust. The feeling of being welcome in the world can be formative for the further life. The child's soul reacts strongly to the outside world, although conscious memories rarely reach back to the age below 4 years. Experiences submerge into the subconscious. Research in developmental psychology shows that lack of attention and security at this age can cause later anxiety, problems in social behavior and self-esteem.

The age after 9 to about 11 years brings a stabilization in the development. The child is open to the world, can already classify or question many things.

Parents are also more scrutinized. The rules at school are internalized, the child decides to what extent he or she wants to comply with them. A change takes place in formal thinking, logical and causal connections are sought. The fairy tale period is over. The child develops self-control and the ability to self-reflect; he or she takes the first steps toward self-discovery.

The curves of Jupiter and Saturn are ascending, with a harmonic peak around the 10th year of life. Jupiter forms a sextile to itself, Saturn a trine to the natal position. This is well visible in the curves. Maybe you can remember your 10th birthday? Are there still contacts with the birthday guests at that time?

The body proportions are quite harmonious at this time in many children. The child usually moves in a well-proportioned body with appropriate movements. growth (Jupiter) and limitation (Saturn) are in harmony.

The ego is also in harmony with itself. Many children find their creative expression and sometimes already their inner calling in sports, dance, art and literature, the natural sciences and many other areas.

It is the peak of childhood, an often harmonious time for the child and the parents. The child is usually still open to the parents' influence and to common ground. It is the calm before the storm, until the approaching puberty brings a different life situation.

The superior curve of the planets also shows clear disharmonies. This will be discussed in the next issue.

The topic will be continued in the next issue.

Guest contributions

Do you have people, groups of people, special events or groups of events?

We will review you and, if suitable, conduct research and publish the results with you in our journal or in an international peer reviewed journal.

Your own research?

If you intend to conduct your own research independently of us, you can purchase the astro-basis program (manual here: <http://www.planetare-korrelation.eu/program-astro-2.htm>). With this program all research results were obtained, which were published in the international journals

Earth & Environmental Science Research & Reviews;

International Journal of Clinical & Medical Informatics;

Journal of Robotics and Automation Research;

Journal of High Energy Physics, Gravitation and Cosmology;

were published.

For further requirements you can also purchase the astro-extended program (manual here: <http://www.planetare-korrelation.eu/program-astro-extended.htm>). This program can among other things also carry out resonance examinations (transits) statistically secured.

Contact us, we will advise you!

Contract research for your personal questions

Do you need quality time for personal appointments, births, or groups of people?

We calculate the time quality matrices for you with statistical tests for significance.

For one appointment we will charge you 80,-€, for groups up to 30 events or persons 120,-€.

Sponsoring

Would you like to support our research financially?

Please get in touch with us. Your support can also refer to individual studies, for example. An internationally published research article can then include the addendum: "This research was conducted by *Your name or company*.... sponsored. In addition, your name or company can - if you wish - be published on our homepage with a link.

Contact us, we will advise you!

Registration
