Harmony and disharmony in February 2023

Biographical rhythms from the 13th to the 24th year

IQ Stimulation Part IV  
The quality of time for the stimulation of the IQ of gifted people

Historical events  
The world economic crisis 2010

*Astronomical observatory on La Palma*

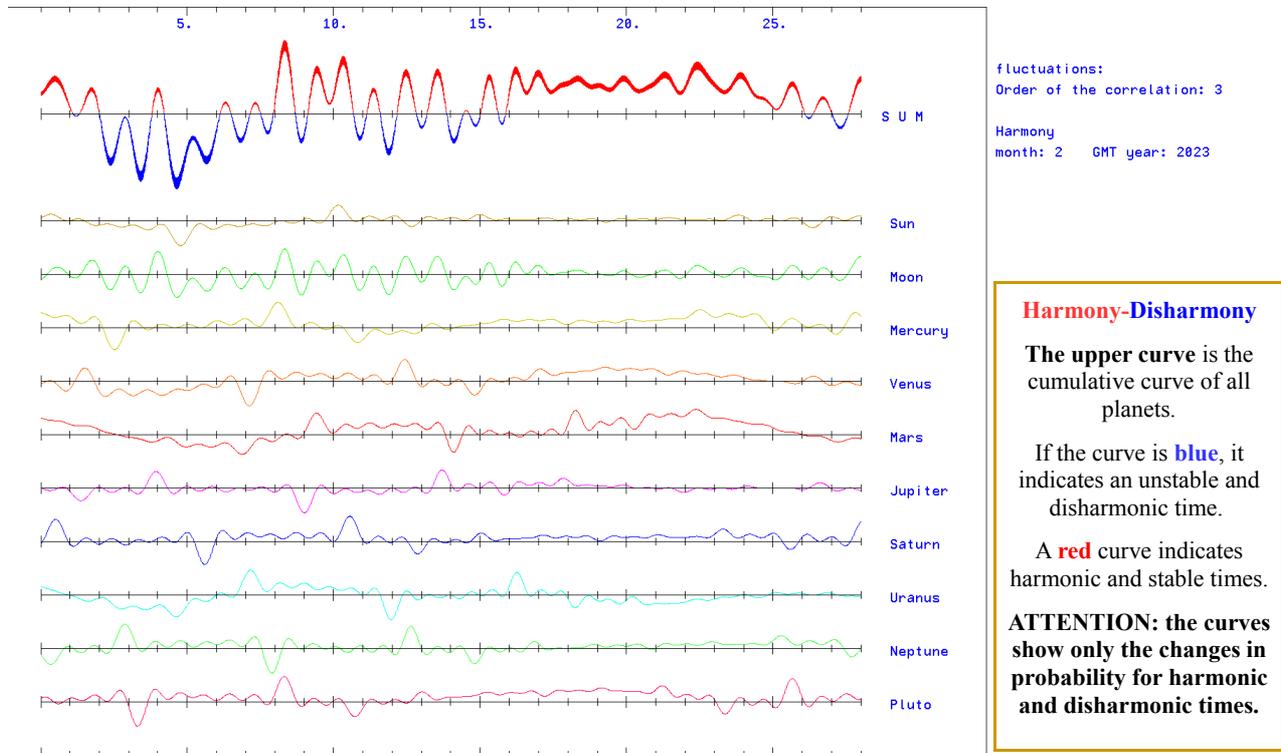

## Editorial

Today it is assumed that about 50% of intelligence is transmitted to the child through the genes of the parents. A large part of the intelligence is influenced by the environment of the child. To the environment also the constantly changing gravitational field of our planetary system belongs. In this issue, in addition to the current quality of time in February 2023, the focus is on the birth of man one last time. We examine how the quality of time changes before and after birth in highly gifted individuals. In the article on Biographical Rhythms, we continue by looking at the 2nd cycle from the 13th to the 24th year of life. The world economic crisis of 2010 is examined and the comparison is made with the world economic crisis of 1929. What do these two crises have in common in terms of time quality? Can we conclude when there might be another major crisis? Is there a pattern in the quality of time that can be repeated in the future?

Your Wave Astrology Team

## Harmony und disharmony in February 2023

Let's first look at the harmonies and disharmonies:

**Figure 1;** The quality of time in February 2023; Full Moon is on the 5th, New Moon on the 20th.

The first half of February (until the 15th of the month) is subject to an alternation of harmony and disharmony caused by the vibrations of the Moon. This mood instability can relate to whatever is on your mind.

The Full Moon forms a local minimum on February 5, signifying a strong disharmony. Not only Moon and Sun are in disharmony, but also Venus and Uranus. This minimum is ushered in by a strong disharmony of Mercury-Moon and Pluto-Moon. Financial matters should be, if not suspended, very much controlled during these two days. More favorable opportunities are promised by the days beginning February 9.

Pay attention to Saturn on February 6, it has a local minimum on this day and at the same time Mars and Moon are disharmonious. Such a quality of time tempts to unfocused actions, combined with unbalanced feelings. Deceptions are easily possible. Saturn was sometimes called an evildoer in ancient astrological sources. Today we value Saturn as a great teacher. Disharmonies related to Saturn are a sign that learning tasks should be observed. This can also be about order, structure and rhythm.

From February 15 Mercury, Venus, Mars and also Pluto become harmonious.

Are you in a partnership?

So enjoy this time, the beauties of this world are waiting for you.

Are you lonely?

Try to find a partner during this time, if you want to.

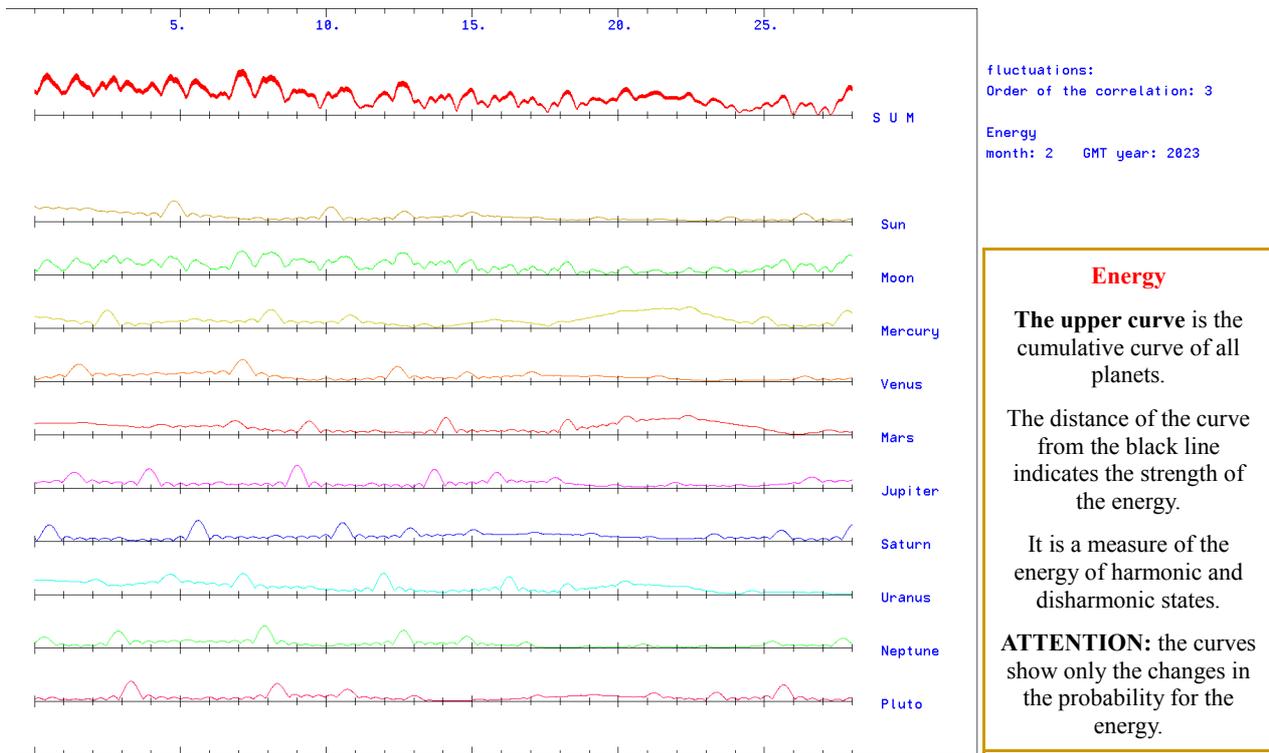

Figure 2; The energy of the quality of time in January 2023.

*Evolution is a constant change between harmony and disharmony, between stability and instability. If it were not so, nothing would evolve. In a generally difficult time, one should use the harmonious times to do something that promises a little more success. It is like sailing. Those who have learned it will come through the storm better, the storm itself cannot be conjured up.*

## IQ Stimulation Part IV

### The quality of time for IQ stimulation of gifted people

Continued from 2023/01

A list of 62 children tested for giftedness forms the birth data for the study. The children were tested at the University of Munich or the Munich Children's Center.[2]

Order/ Probability	1	1 with IC	1 without Pluto	3	6	9	12
Correlation H	1,74	13,9	1,75	14,39	18,95	18,61	5,42
Energy I	3,37	1,59	1,09	2,01	4,16	4,84	10,03
Dynamic D	94,79	91,60	95,32	82,71	82,32	86,87	87,95
Dynamic absolute DA	85,23	77,75	19,53	0,85	0,82	3,04	3,74

**Table 1.** The different orders of the correlation function to the group of 62 highly gifted individuals. Significant values are highlighted in red and blue.

The superposition of the individual birth time matrices indicates a more or less strong harmony for all orders. For the 1st order it is even significant (1.74). This means that only 1.74% of the 10000 control groups at 62 events each ("birth times") show a higher harmony.

The energy is significantly high up to the 9th order.

The dynamics (1st derivative of the correlation function) is low. For the first order, 94.79% of the 10000 control groups have a higher dynamic. This means that at the time of birth, the time quality shows little tendency to change and is therefore relatively stable.

The values in table 1 apply in each case to the total state of the correlation matrix.

If we look more closely at the 1st order correlation matrix, the following pattern emerges:

```

Statistics 4: Probability of events: correlation matrix H

BEGIN: year: 1948 month: 1 day: 1 hour: 0 END: year: 2001 month: 1 day: 1 hour: 0
    
```

As you can see in the right column (line sum of the celestial body) it is mainly Mars, Jupiter, Saturn and Neptune (almost significant) which cause the significant total harmony. In this group there are only the correlations of Mars - Jupiter (0.37) and Jupiter - Saturn (4.04) which are significantly harmonic.

**From this one cannot deduce that already a significantly harmonic time quality is a sufficient condition for the increase of the probability for a high talent!**

Are these planets also significant in energy?

```

```

As you can see in the right column (line sum of the celestial body), it is mainly Moon, Uranus and Neptune which are decisive for the high energy of the total matrix.

In detail Mercury - Uranus (5,06), Mars - Saturn (4,35), Uranus - Neptune (0,81) and (unexpected) Uranus - Pluto (0,17).

**Also from these results one cannot deduce that a time quality with high energy also brings an increase of the probability for a high talent!**

Can the correlation matrices H and I already be used for prediction to estimate the change in probability in the quality of time for giftedness?

For this purpose, the individual values of the group of the highly gifted are compared with the expected values. It is asked, how many of the highly gifted have a harmony that is above the expected value?

The expected value is 31 in 62 events. The following table shows the results (without Pluto):

Matrix – Mean Continuum	Expected value	Hit with the highly gifted	About expected value are
1. Harmony H (0,21)	33,61	39	16,03%
2. Energy I (164,31)	31,76	38	19,65%
3. H und I together	17,21	21	22,02%

**Table 2.** All 62 group members are examined in how far they have a harmony or energy above the expectation. The expected values were obtained from 100 000 individual calculations in the time interval.

Thus, from Table 2, we can make initial estimates of the increase in the probability of the birth of a highly gifted child.

1. if the time quality harmony is above the mean value of this period, the probability is increased by about 16% on average.
  2. if the energy is above the mean value during this period, the increase in probability is about 20%.
- If both harmony and energy are above the mean for this time period, the increase in probability is about 22%.

**Please be sure to note:**  
Other character traits also have an above average harmony at their time of birth. An example of this will be brought in one of the next magazines.

**This is true of course only if the other conditions (e.g. the combination of the genes) for a high giftedness are given!**

One can assume, however, that the fulfillment of these conditions for the time quality, also for other births increases the probability to reach a better IQ, if also the genes do not let expect necessarily a high giftedness.

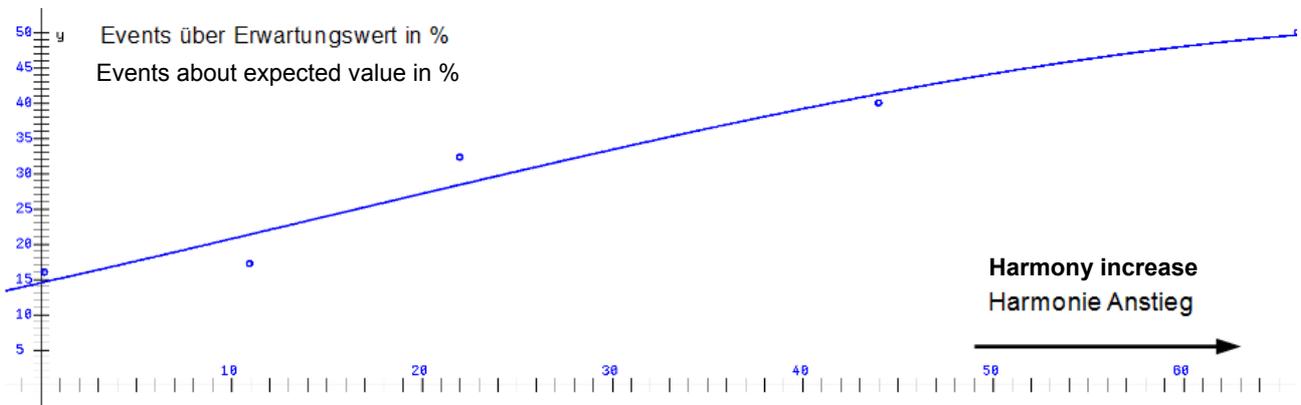

The average value of all highly gifted ones lies both with the harmony (0,21 => 10,98) and with the energy (164,31 => 173,94)

Matrix – mean value of the events	Expected value	Hit	About expected value
1. Harmony H (10,98)	26,44	31	17,25%
2. Energy I (173,94)	24,89	32	28,57%

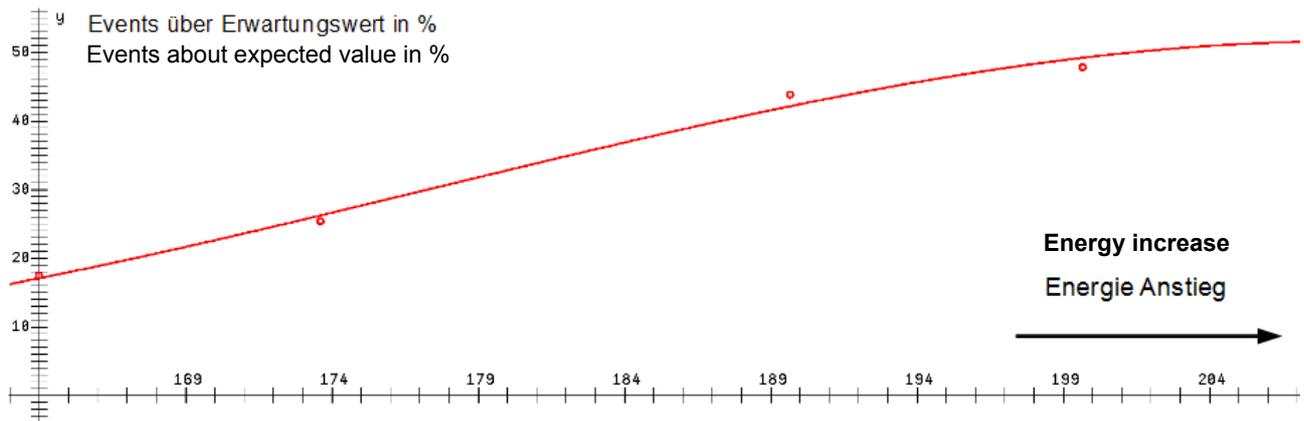

**Table 3.** All 62 group members are examined in how far they have harmony or energy above the expectation. Expected values were obtained from 100 000 individual calculations in the time interval.

If the thresholds for harmony and energy are further increased, the hit rate of the high gifted also

increases, as the following curves show.

**Figure 1;** If the thresholds for harmony are further increased, the hit rate of the high gifted also increases.

**Figure 2;** If the thresholds for energy are further increased, the hit rate of the high gifted also increases.

The increase in the probability of stimulating a higher IQ in the highly gifted suggests that the highly gifted are born at times of increased energy and harmony. As Table 1 already shows, little dynamic, little change can be read in the period of birth.

For more detailed investigations, the correlation matrices are examined and an optimization procedure is used if necessary.

**What distinguishes the group of highly gifted persons (IQ>130) from the group of persons with an IQ above the average?**

If we assume that highly gifted individuals have an IQ>130, this group can be placed in the series of groups examined previously. Does the trend remain?

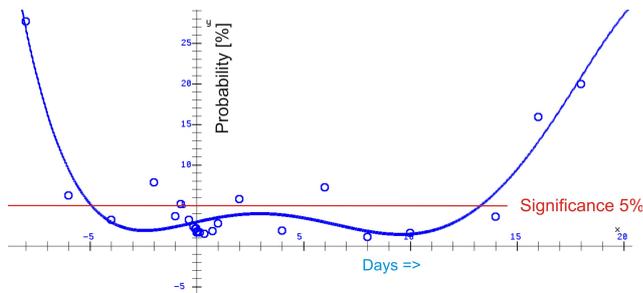

This trend for harmony H is also preserved; in addition, the calculations indicate significantly higher energy. The calculations were made without considering the IC (center of the earth).

Grupp/ Probability	1 (46 Persons)	2 (46 Persons)	3 (47 Persons)	4 (47 Persons)	5 (62 Persons) highly gifted
Correlation	84,67	55,31	19,45	0,23	1,74
Energy	50,54	99,03	99,75	98,92	3,37
Dynamic	90,60	56,06	89,05	64,48	94,79
Dynamic absolute	98,02	94,29	99,95	99,63	85,23
medium IQ	96	100	109	122	>130

**Table 4;** trend of correlation function for increasing IQ. The probability of error for the matrix of harmony and energy is extremely low: 0.65% . Besides the harmony, there is also a high energy for it.

**What is the quality of time before and after birth?** The calculations are shown in figure 3.

**Figure 3;** Matrix H is significantly harmonic in a range of 4 days before and 14 days after birth, for a total of 18 days.

**Summary.**

The study of the period around the birth shows: there is a larger window of stability. This means that in individual cases it can be important that it is still harmonious days after the birth. Since the harmonious quality of time affects not only the baby, but also all the people who are present at the birth, it seems more likely that the starting conditions for a good development of the child's brain are laid here. This is very surprising, but it coincides with the experience from birth psychology. The high energy indicates that relatively many oscillators (planets) are in a harmonious state.

**However, it is important to note that these are only statistical results, which do not have to be true in individual cases. Correlations are not causalities!**

### Concluding remarks

It is a fact, as other researches also show [5], that the planetary gravitational field has an influence on many areas of evolution on Earth, although the gravitational forces are very weak. Especially the extensive researches on the highly gifted confirm this statement.

In one of the next issues of the magazine we will examine the character trait "willingness to take risks". Can also in this case already from the time quality to the birth changes of the probability for this personality characteristic be found?

## Historical events

### The global economic crisis 2010

Wikipedia: "World financial crisis or global financial crisis refers to a global banking and financial crisis as part of the global economic crisis from 2007. The crisis was, among other things, the result of a speculatively inflated real estate market (real estate bubble) in the United States. The beginning of the financial crisis is considered to be August 9, 2007, when interest rates for interbank loans rose sharply.[1] The crisis culminated in the collapse of the major U.S. bank Lehman Brothers on September 15, 2008. The financial crisis prompted several countries to secure the existence of major financial service providers by increasing their capital by enormous amounts, primarily through state borrowing, but also through equity capital. Some banks were nationalized and later closed. The already high national debt of many states rose sharply as a result of the crisis, especially in the USA.

...

On April 3, 2009, the International Monetary Fund (IMF) estimated global securities losses as a result of the crisis at four trillion U.S. dollars.[2][3]

.....

From 2009, the euro crisis followed. It is considered to have been triggered when the newly elected government of Greece in October 2009 announced that net new debt in 2009 would not be around 6% of GDP (as deliberately misstated by the previous government), but at least twice that amount. In 2010, the European Financial Stabilization Facility (EFSF) was created, and in 2012, the subsequent European Stability Mechanism (ESM) was launched to prevent sovereign insolvencies. ... "

The beginning of the global financial crisis is set to August 9, 2007.

What was the quality of time in August 2007 ?

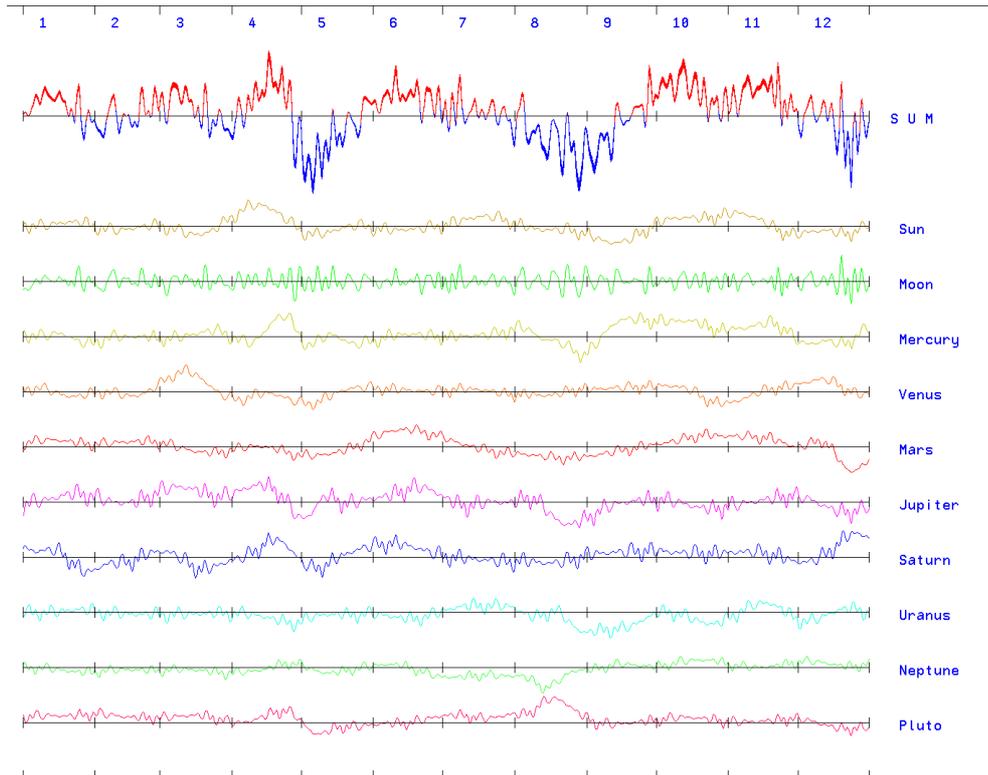

Figure 1 shows the 1st order time quality for all planets. If the correlations of all planets are superimposed, it may be possible to determine triggering (higher) frequencies that cause an existing tension (here the real estate bubble) to be triggered. This year, such triggering times are in May, August and December.

On August 9, 2007, interbank lending rates jumped when a discordant period also began, lasting until about mid-September. This allowed instability, once triggered, to persist.

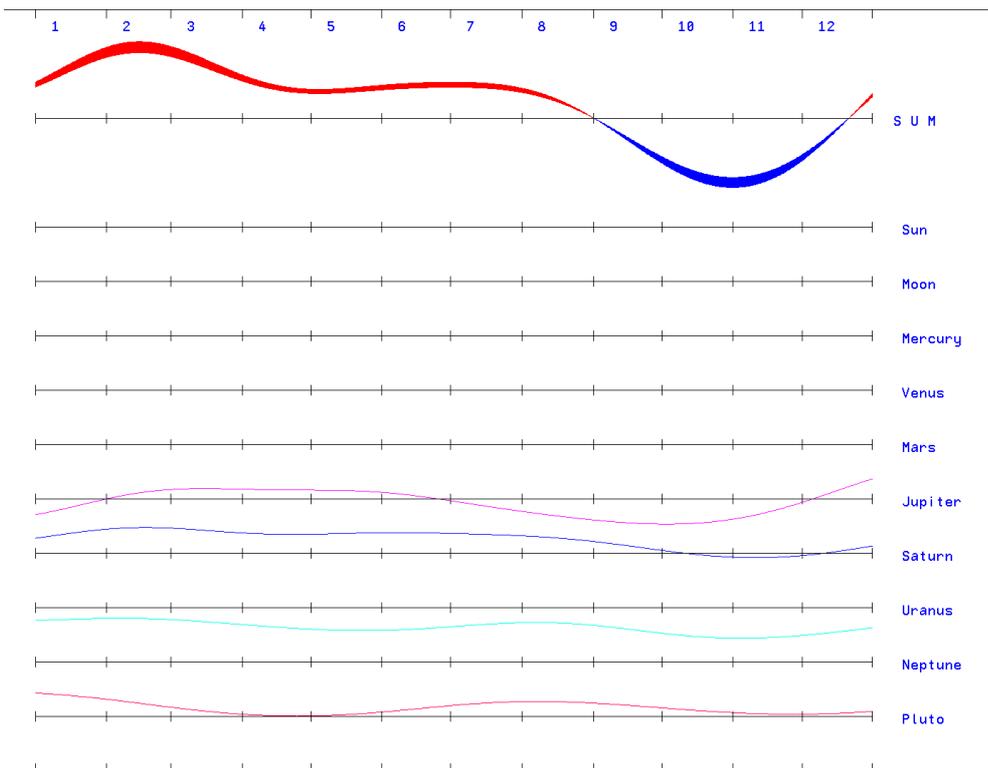

Of course, there was a possibility of triggering in May as well, but not every discordant period leads to triggering events, it just increases the probability.

Interesting in this context is the disharmony of Neptune in July and August.

Astrological experience (could not be verified wave-astrologically yet) says that a disharmonious Neptune obscures reality and can lead to illusions being given more weight.

**Figure 1;** The time quality for all planets in 2007, the beginning of the global financial crisis.

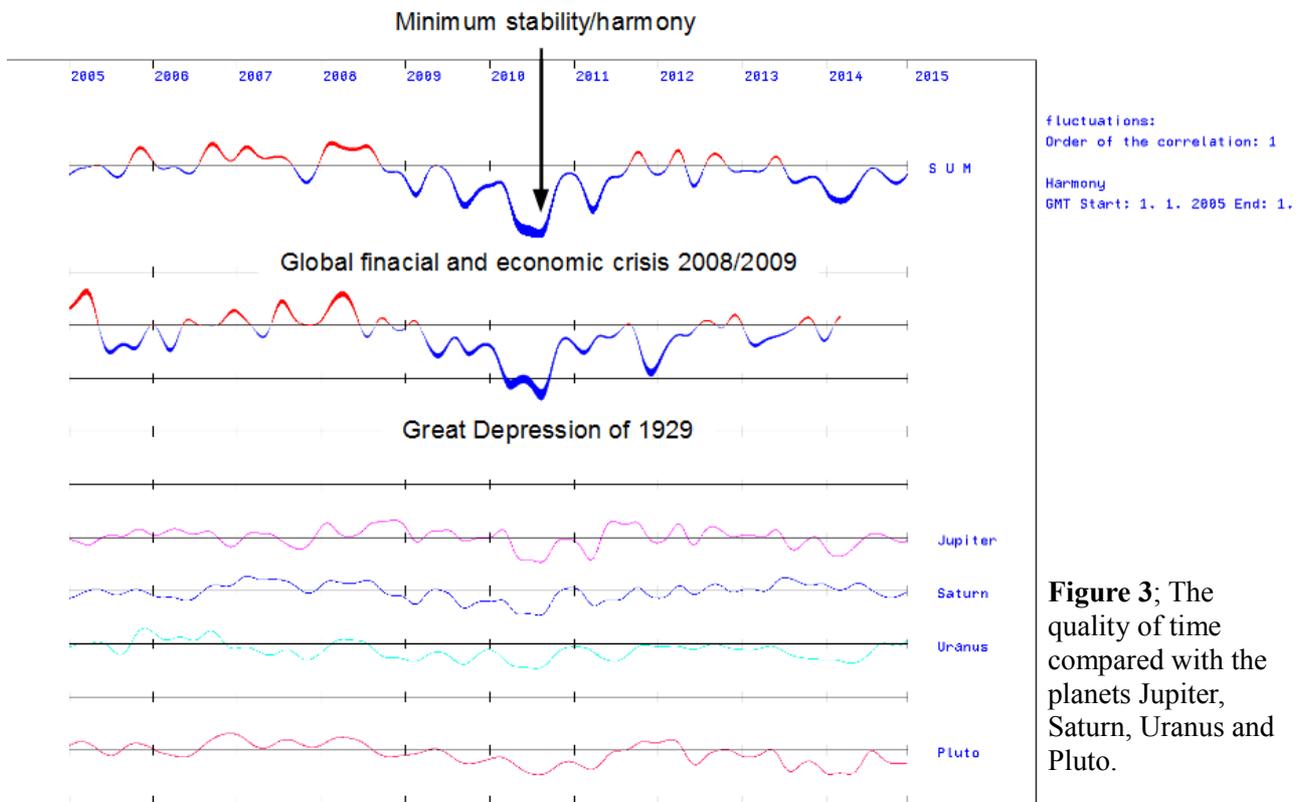

**Figure 2;** The quality of time in 2007, the beginning of the global financial crisis, with the planets Jupiter, Saturn, Uranus and Pluto.

If only the planets relevant from the Great Depression of 1929 are used, they show that the time quality deteriorated in August 2007 and lasted until the end of December. A first minimum was at the end of October.

A comparison with the Great Depression of 1929 is shown in Fig. 3. The low point of disharmony was reached on August 8, 2010. Therefore, this crisis could also be called the financial and

economic crisis of 2010. This minimum is also highly significant throughout the century (2000 to 2100).

**Figure 3;** The quality of time compared with the planets Jupiter, Saturn, Uranus and Pluto.

The highly significant time quality of the minimum of August 8, 2010 is shown by the following computer printout for the harmony and the energy:

### Summary

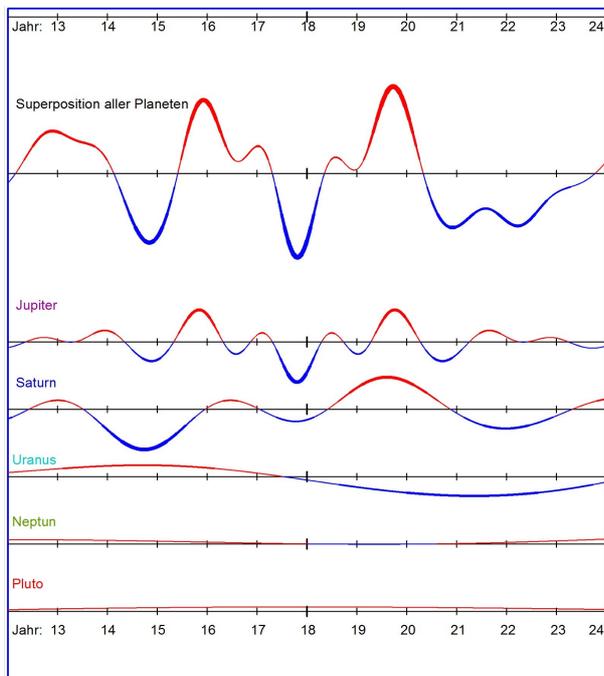

The Great Depression of 1929 and the global financial crisis of 2010 show the same frequency patterns: a state of stability that deteriorates over a longer period of time to a highly significant minimum. This is certainly not a sufficient condition for such a crisis. There is always the possibility of learning from the previous crisis in order to take appropriate measures in good time to avert an impending crisis situation.

Will there be similar patterns for time quality in the future?  
 We will investigate this in the next post.

## Biographical Rhythms from the 13th to the 24th year

At the age of 18, young people are of legal age according to the law, with all the rights that go with it, but also obligations. Some young people overlook the fact that rights and duties correspond with each other. This brings conflicts.

This age, when there is a disharmony of unfolding (Jupiter), maturity (Saturn) and readiness for change (Uranus), is a developmental crisis. It is often a time of conflict, but one in which directional life decisions are (have to be) made. The situation in the parental home becomes difficult. Some parents have problems with themselves in the partnership or in the job, if they are just in the phase of life from 36 to 48 years. This intensifies the conflicts between parents and the now adult child. Some parents also find it difficult to let go. External circumstances, such as the lack of their own income, prevent the young person from becoming independent and lead to a perceived stagnation.

If it has not yet happened, the pressure to decide on vocational training grows at this age. There is a wide range of career options to choose from.

Many therefore postpone this decision by taking

advantage of opportunities for time off. These include, for example, community service, a voluntary social year or a stay abroad.

The curves show that at 19/20, Jupiter and Saturn are again in harmony. Jupiter and Saturn each form a trine to the natal position, the ship of life gets tailwind. Decisions and planning for the future often become easier. Thinking and acting become more reasonable and goal-oriented. Also the perseverance (Saturn) usually becomes stronger. Thus future projects are favored, because the descending curve of Uranus already indicates the coming decision situations.

At about 21, Jupiter, Saturn and Uranus get into disharmony again. Saturn runs into a square to itself, Jupiter likewise. This tense time is intensified by Uranus, whose curve now also shows longer disharmonies, it forms the first square to the natal position at about 21 years. Solutions from the usual are necessary. New freedoms are sought. Separations and changes go along with it. At the age of 21, the adolescent used to be of age.

If planets form a square constellation to themselves, then it is a call to creatively overcome the crisis. At this youthful age it is a call to dare to set out into one's own life.

The signs are for a new beginning and for personal responsibility. This also concerns the spatial distance from the parental home, if this has not yet taken place, so that one's own can be developed. The move out of the parental home should take place now. The adolescent is mature enough to shape his life according to his own rules and visions.

Not every young person actually finds their own way at this age. This can be seen in the individual rhythms. Some do not want to or cannot give up the comfort and security of the parental home. But experience shows that it is easier to live in harmony with biographical rhythms. Leaving one's parents also becomes either more conflictual at a somewhat later age, or is avoided for many years by seeking alternative solutions, for example, installing an apartment in the parental home. This can also be right for the individual.

It must be remembered, however, that self-responsible development also requires free decisions. Personal responsibility also needs to be practiced. The comfortable life in the parental home in adulthood hinders or prevents one's own independent life.

If a young person has failed to take control of his or her life at the right age, new opportunities will arise later in the course of further rhythms with the corresponding crisis situations. However, one can also observe biographies in which the separation from the parental home does not succeed. Also such a draft of the life is to be respected, since there can be developments, which take place completely in silence. In such biographies, the onset of the parents' need for care is later perceived as a relief, because now no one in the social environment expects one to move out of the parental home, and annoying inquiries about a profession finally subside.

At 22, Jupiter is sextile to itself, you see the harmonic curve, but Saturn is square to itself, and Uranus is also still in the disharmonic area. In some biographies this time brings uncertainties and difficulties. The preoccupation with "youth issues" can also drown out the problems. Often partnerships, friends, the started or still to be found profession, parties, travels and the like are in the foreground.

At the end of Jupiter's 2nd orbit at about 24, many young people have an overview of their life goals (for now), they want to shape your life and enjoy it. Jupiter, Saturn and Uranus are harmonious.

With each orbit of Jupiter in the natal chart, man reaches a new stage of development, acquires more knowledge of the possibilities that life offers him, and often more longing to be able to better grasp his life's meaning and his own.

I live my life in growing rings,  
that stretch across things.  
I may not be able to accomplish the last one,  
but I will try.

I circle around God, around the ancient tower,  
and I circle for millennia;  
and I do not yet know: am I a hawk, a storm, or a  
great song.

Rainer Maria Rilke

In the poem "Ich lebe mein Leben in wachsenden Ringen" (I live my life in growing struggles), Rainer Maria Rilke aptly expresses this feeling. He wrote these lines when he was just under 24 years old.

*The design phase from 25 to 36 years is explained in the next magazine.*

## Guest contributions

### **Do you have people, groups of people, special events or groups of events?**

We will review you and, if suitable, conduct research and publish the results with you in our journal or in an international peer reviewed journal.

### **Your own research?**

If you intend to conduct your own research independently of us, you can purchase the astro-basis program (manual here: <http://www.planetare-korrelation.eu/program-astro-2.htm> ). With this program all research results were obtained, which were published in the international journals

*Earth & Environmental Science Research & Reviews;*

*International Journal of Clinical & Medical Informatics;*

*Journal of Robotics and Automation Research;*

*Journal of High Energy Physics, Gravitation and Cosmology;*

were published.

For further requirements you can also purchase the astro-extended program (manual here: <http://www.planetare-korrelation.eu/program-astro-extended.htm> ). This program can among other things also carry out resonance examinations (transits) statistically secured.

**Contact us, we will advise you!**

## Contract research for your personal questions

### **Do you need quality time for personal appointments, births, or groups of people?**

We calculate the time quality matrices for you with statistical tests for significance.

For one appointment we will charge you 80,-€, for groups up to 30 events or persons 120,-€.

## Sponsoring

### **Would you like to support our research financially?**

Please get in touch with us. Your support can also refer to individual studies, for example. An internationally published research article can then include the addendum: "This research was conducted by ..... *Your name or company*.... sponsored. In addition, your name or company can - if you wish - be published on our homepage with a link.

**Contact us, we will advise you!**
